

Stallion information

March 2026

Stallion information 2026

We provide the Stallion information 2025 as a tool to help with stallion choices. Opting for the best-quality stallions when choosing a stallion is not the only key factor to be considered, making correct pairings is even more important. The KFPS strives to provide as much data as possible regarding hereditary aspects of stallions.

Which stallions?

The 2025 edition lists all living and active stallions with a breeding permit. Deceased stallions are not listed but for some of them frozen semen is still available. Please check the website for information or get in touch with the stallion station.

Exterior breeding values

When looking at breeding values for exterior it must be taken into account that the data of young stallions does as yet not include information about their offspring. These breeding values are based on lineage information and exterior assessment (linear score) of the stallion himself. For stallions that have completed progeny testing the breeding values are almost completely based on inspection data (linear scores) and ABFP data of offspring. The reliability of breeding values for young stallions is still low. This means that their breeding values are more likely to change (when more offspring are inspected or tested) than in the case of older stallions with a high reliability index. Because of the lower reliability of breeding values for young stallions, these are compiled based on a more reserved estimate and are therefore closer to the breed average (100).

Which characteristics?

The following characteristics of stallions are listed:

1. Breeding values (linear) exterior characteristics
2. Breeding values for movement/sport aptitude (based on aptitude tests)
3. Breeding values for character
4. Breeding values for sport (based on competition sports)

Explanation breeding values

Considering the complexity of breeding value estimates for exterior characteristics and sport aptitude, it is necessary to provide an explanation about how these figures are compiled and how they should be interpreted. This explanation pays attention to how these figures can be used for stallion choices.

The linear exterior characteristics

The breeding values for the exterior characteristics are based on the linear scores which, since 1993, are being recorded at the moment of acceptance of horses in the Studbook. Scores ranging between 5 and 45 are recorded for 25 exterior characteristics, with the average being 25. In the case of linear characteristics we are strictly dealing with observations and not evaluations. The choice of characteristics is such that the linear report provides a picture of the horse's exterior that is as complete as possible.

Lower breeding values due to a base year adjustment

The breeding values published in December 2025 are on average lower than the previous year. A so-called base year adjustment has been made, in which the base year 2006 has been adjusted

to 2015 for conformation and movement traits and to the years 2013 through 2016 for temperament and sport. The relative ranking among the stallions remains the same; only the breeding values are lower. A breeding value of 100 can therefore once again be considered the population average. Check the website for more information and/or scan the attached QR code for the explanation on the website

The linear characteristics are divided into two entities: Optimum characteristics: characteristics with the average score (25) or breeding value (100) being the most favourable. Examples of such characteristics are: back conformation and hind leg conformation. Maximum characteristics: characteristics based on the principle of: the higher the better (e.g. expression of the head, movement expression etc.), or characteristics where the optimum clearly lies above the average like neck conformation and shape of the feet. The differences are visually recognisable because the breeding values for maximum characteristics are represented in dark-blue bars (favourable) and red bars (unfavourable) and breeding values for optimum characteristics in light-blue bars. In addition to the 27 linear characteristics the overview lists one measured characteristic, which is height at withers.

Reliability

The degree in which the breeding value gives an accurate picture of a stallion's true genetic aptitude is expressed in the reliability estimate (btbh.). Reliability is chiefly influenced by the number of inspected offspring. Breeding values with a low reliability can still change considerably when more offspring are inspected. Reliability can be interpreted as follows:

btbh.	interpretation
< 70%	moderate reliability
70-80%	reasonable reliability
80-90%	good reliability
>90%	very good reliability

To be eligible for publication, the reliability of every breeding value has to be 30% or more.

The rating exterior characteristics

In addition to the 27 linear exterior characteristics, scoring is also done for 5 rating characteristics: breeding type, conformation, legwork, walk and trot. Whereas linear characteristics are mere descriptions, the rating characteristics are evaluative. For the assessment of the rating exterior characteristics the related linear characteristics play an important role. The rating characteristics are scored within the range of 4 to 9. Since 2016 the marks for rating characteristics that are scored in the context of upgrading are also included in the breeding value estimate. Additionally, since 2017 the lower bar figures scored in the classes for Star mares are also included in the breeding value estimate.

Movement and sport aptitude

The breeding values for the movement characteristics walk, trot and canter are computed on the basis of the scores for walk and trot in the exterior inspection and the scores for walk, trot and canter from the aptitude tests (ABFP and IBOP). The higher the number of offspring whose information is collected from the aptitude tests, the smaller the influence of in-hand movement will be for breeding values. In case of large numbers of offspring and the information derived from their aptitude tests, the influence of in-hand movement even becomes virtually zero. The reason for this being that movement in the aptitude tests (under saddle and in harness) is closer to the breeding goal than in-hand movement.

The estimation model

The breeding values, estimated by CRV, are estimated with a so-called estimation model. The estimation model indicates which of the factors influencing the differences between (in this case) stallions are subjected to corrections. The exterior scores are corrected for the following effects: breeding value of the offspring's dam, age at the moment of inspection, gender; Jury member and inspection. This correction is carried out in order to produce the clearest possible picture of the degree in which the differences between batches of offspring are caused by a difference in genetic aptitude of the stallions. Because of these corrective factors it basically does not matter if one stallion is paired to higher-quality mares than others. The type of estimation model used is the so-called animal model. Along with data of offspring, animal models also include information of relatives. The contribution of this information decreases as the available information of offspring rises.

Character

Breeding values for character are being included since the 2020 edition. This information stems from the twenty offspring in the ABFP Tests that are scored on character by the rider team. The published character/personality characteristics are: reliability/predictability; trainability; willingness to work and stamina.

Sport (competition sports)

Starting with the 2023 edition, the breeding values for sport

Interpretation of breeding values

Breeding values are set at an average of 100 with a range of 4 points on either side. This basis was fixed at 2006. The average breeding values of all horses born in 2006 were fixed at 100 for every characteristic and the range (standard deviation) of these breeding values was fixed at 4. Breeding values with a deviation in relation to 100 of one time the range (between 96 and 104) have to be considered as being average. Over 2/3 of breeding values are found in this area. It is self-evident that the larger the deviation from 100, the bigger the expected effect will be. A stallion with a breeding value of 109 or higher for say, movement expression, ranks with the best 2% of stallions in the population. With a breeding value higher than 112 this is 0.1%. The breeding values for total-exterior and total-movement are the average of the underlying characteristics (breeding type, conformation and legwork respectively walk, trot and canter), multiplied by 1.25 in order to achieve a range of 4 for the total-breeding values.

Description of breeding values

The breeding values are depicted by 'bars' per individual characteristic. As pointed out, the maximum characteristics are printed in dark-blue (favourable) and red (unfavourable) and optimum characteristics in light-blue bars. For optimum characteristics, (extreme) deflections to the left or right represent an unfavourable picture, here 100 is the optimum.

Summarising: bars to the left are usually unfavourable and bars to the right are favourable, except for the light-blue bars.

based on sport data are also listed. The information is provided by the KNHS and the highest known results for dressage and driving dressage are used. The reliability is still low and the degree of heredity small. For the future the intention is to also add the international sport data from the Sport Federation FEI and the results in showdriving sports.

Use of breeding values

The breeding values for exterior are an excellent tool for making the right pairing combination. The way to do this is by checking the mare's linear score form for aspects that should be corrected. If the characteristic that needs to be improved is a maximum characteristic then a stallion must be selected who has a (distinctly) positive hereditary profile for passing on this characteristic (bar to the right). If it is an optimum characteristic then the best choice would be a stallion with a (light) deviation in the opposite direction, depending on the mare's score.

Use of breeding values for sport aptitude

As you can see there are estimates for breeding values of basic gaits in the exterior bar and in the sport aptitude bar. The first is based on the assessment of basic gaits in the inspection ring

Foal Report 2025

Analysis 1st collection foals Studbook stallions

Last year Studbook stallions Jeroen 535, Elger 536, Jeppe 537, Nyk 538, Martinus 539, Murk 540, Manno 541, Menso 542 and Mans 543 presented their first year crop of foals. In total 1129 foals were inspected at the various exterior inspections, 332 of these foals belonged to the first crops of above-mentioned stallions. This year too these 332 foals were submitted to linear scoring and outlined in deep detail.

For the interpretation of this report the number of foals born versus inspected foals must be taken into account. A lower number of inspected foals obviously renders a less reliable picture. The quality of mares matched per stallion must also be factored in for the interpretation. This information per stallion can be looked up in the statistics diagram.

Each stallion has his own diagram with the results of linear scoring. This diagram provides insight into a stallion's hereditary profile per characteristic. For this it must be factored in that this is an initial indication of the hereditary profile and needs to be interpreted as such.

* The report frequently indicates that the characteristic in question covers a wide 'range'. This means that there is not a very clear hereditary profile for that specific characteristic. Less desirable, average and positive assessments occur just as frequently.

** Column 'Total of these stallions' applies to stallions that presented their first year collection in 2025.

*** Column 'Total average all inspected foals' applies to all foals inspected in 2025.

AMBER HOOGVEEN

Jeroen 535 (Anders 451 x Folkert 353)

SANDRA NIEUWENDIJK

Too few Jeroen 535 foals have been inspected to compile a reliable report. Only 4 out of the 35 born foals were presented for interior inspection. The description that follows therefore only provides a very tentative picture.

The foals that were inspected show satisfactory breed expression, the heads express satisfactory noble quality. The head-neck connection is a trifle heavy. The necks have good length and vertical conformation of the neck is satisfactory, with the neck often rising deep from the chest.

The foals show satisfactory to good development with good body shape. Shoulder conformation is a bit steep. The loin section should be a little better connected. The croups score average on conformation and need more length.

Correctness of foreleg conformation is satisfactory. The legwork shows satisfactory quality. Stance of the hind leg is satisfactory.

The walk seems a bit short and needs to develop more power.

The trot should have more scope and the hind leg needs to be placed a bit more under the body. Suppleness in trot varies and occasionally the trot lacks a little bit in strength.

Blue	Average score / characteristic Positive
Light blue	Breed average / satisfactory
Yellow	Wide range in hereditary profile
Orange	Point of attention

With his first year collection of foals **Elger 536** presented a group of more than satisfactorily developed foals. His foals have satisfactory high-legged and longlined conformation. From **Elger 536's** total number of born foals 34% have been inspected. The foals show more than satisfactory breeding type and satisfactory length of necks with a vertical build. There is a wide range in head expression and head-neck connections. A slightly longish face with a Roman nose occurs from time to time.

The foals have average, slightly downhill body shape. Shoulder conformation is sloping. The topline should be slightly more closed and the back a bit stronger. The loin section connection usually shows satisfactory strength. Croup conformation is sloping with generally satisfactory length.

The legwork radiates good quality. Correctness of foreleg is slightly wanting, toeing-in frequently occurs. Stance of the hind leg is frequently sickle-hocked.

In walk they present a uniform picture. Generally, the foals walk with more than satisfactory length of stride and ample power. A few foals struggled with the rhythm.

The foals display lots of power in trot with ample shoulder freedom and suppleness. The trot shows good ground-coverage and uphill quality. There is some variety in use of the hind leg but across the board the hind leg is placed satisfactorily under the body.

Blue	Average score / characteristic Positive
Light blue	Breed average / satisfactory
Yellow	Wide range in hereditary profile
Orange	Point of attention

With his first foal collection **Jeppe 537** presented a group of very well-developed, longlined and high-legged foals. A relatively high percentage of 44% of his foals have been inspected. In terms of exterior and movement the foals present a very uniform picture. Remarkably, over half of the inspected foals have received a first premium.

The foals have good breeding type with aristocratic heads and long necks with vertical conformation. Head-neck connection varies and is occasionally a bit heavy.

The foals have uphill body shape. Shoulder conformation is sloping. Topline connection shows satisfactory strength. Croups generally show the desired, though a somewhat straight conformation with satisfactory length.

The legwork radiates lots of quality. Foreleg conformation is satisfactory. Stance of the hind leg is generally correct, sometimes a little sickle-hocked.

The walk shows ample uniformity both in length of stride as in expression. Especially in expression of the walk we see foals that move with ample scope and power. The walk is resolute with lots of rhythm.

The trot is ground-covering and powerful. In body posture and suppleness the foals present a uniform picture: they trot in an uphill frame and with ample suppleness. The hind leg is placed far forward under the body. The trot shows notably good forward reach of the foreleg.

Blue	Average score / characteristic Positive
Light blue	Breed average / satisfactory
Yellow	Wide range in hereditary profile
Orange	Point of attention

With his first foal collection Nyk 538 presented a group of well-developed, longlined and high-legged foals. From Nyk 538's total number of born foals 37% have been inspected.

They are foals with good breeding type with strikingly noble heads and occasionally a slightly longish face. The necks are long with a vertical build. The foals would benefit from more neck length, which is why the head-neck connection seems a bit heavy.

We see a certain range in the scores for body shape which explains why there is no clear hereditary profile. Shoulder conformation is sloping.

The topline should be more closed. Particularly the back section needs more strength. The loin connection shows satisfactory strength. Across the board the foals have a somewhat down-sloping croup with satisfactory length.

The legwork radiates lots of quality. Stance of the foreleg is mostly correct. The hind leg is generally sickle-hocked.

The walk scores from satisfactory to good on length of stride and power. The foals walk with good rhythm.

The trot is generally roomy and powerful. The foals trot in an uphill body frame demonstrating lots of suppleness. There is some variety in use of the hind leg but across the board is placed satisfactorily under the body.

Characteristics highlighted in light blue with a * are optimum characteristics. Favourable score for these characteristics is average, so around 25.

Blue	Average score / characteristic Positive
Light blue	Breed average / satisfactory
Yellow	Wide range in hereditary profile
Orange	Point of attention

With his first foal collection Martinus 539 presented a group of well-developed foals with satisfactory longlined and high-legged quality. From Martinus 539's total number of born foals 32% have been inspected.

The foals have good breed expression with aristocratic heads. The necks are long with a vertical build. In some cases the neck rises a little deep from the chest. The foals would noticeably benefit from more neck length, which is why the head-neck connection seems heavy.

The foals have average, slightly downhill body shape. Shoulder conformation is sloping. In the topline the back section should be stronger. The loin connection shows satisfactory strength. The foals display satisfactory to good croup conformation. In croup conformation the collection shows considerable variation which is why a clear hereditary profile is missing.

The legwork radiates lots of quality. Stance of the foreleg is mostly correct. Stance of the hind leg is generally satisfactory.

In walk the foals demonstrate satisfactory to ample scope with satisfactory power and activity. Some foals struggled with rhythm.

Across the board the foals move in a spacious, uphill trot with satisfactory strength. The foals also trot with more than satisfactory suppleness. The hind leg should step a little more forward under the body.

Characteristics highlighted in light blue with a * are optimum characteristics. Favourable score for these characteristics is average, so around 25.

Blue	Average score / characteristic Positive
Light blue	Breed average / satisfactory
Yellow	Wide range in hereditary profile
Orange	Point of attention

With his first collection of foals **Murk 540** presented a group of well-developed, longlined and breed-typical foals that generally have a good walk and trot. In proportion to the number of foals born relatively few **Murk 540** foals (29%) were inspected.

They are foals with good breeding type and satisfactory noble quality of the heads, occasionally we see a slightly longish face. Length and vertical build of the neck are satisfactory. The foals would noticeably benefit from more neck length, which is why the head-neck connection seems a little heavy.

The foals have average, slightly downhill body shape. Shoulder conformation is sloping. The topline has satisfactory closed connections. The backs display satisfactory strength with on average well-shaped loin sections. Croup conformation and length show some variation but fall within the breed average. Croup conformation is somewhat sloping and with satisfactory length.

The legwork is clean and dry and radiates lots of quality. Stance of the foreleg is usually correct. Stance of the hind leg is a little sickle-hocked. Some foals are a bit cow-hocked in the hind leg.

In walk the foreleg shows satisfactory forward reach in combination with satisfactory to ample power from the hind leg. The walk is resolute with a lot of rhythm.

The trot is roomy with good forward reach of the foreleg. The trot is powerful. The hind leg is placed far forward under the body. In trot the foals move in an uphill body frame demonstrating ample suppleness.

Characteristics highlighted in light blue with a * are optimum characteristics. Favourable score for these characteristics is average, so around 25.

Blue	Average score / characteristic Positive
Light blue	Breed average / satisfactory
Yellow	Wide range in hereditary profile
Orange	Point of attention

With his first foal collection **Manno 541** presented a group of well-developed foals with satisfactory longlined and high-legged quality. In terms of exterior and trot the foals present a uniform picture. In walk however, we would like to see more uniformity. In proportion to the number of foals born a relatively large number of **Manno 541** foals (48%) were inspected. However, for the interpretation of these data regarding reliability it must be factored in that only a limited number of foals (11) were inspected.

The foals radiate satisfactory breeding type, but with a wide variety in head expression. The foals have long necks with good vertical stance. The head-neck connection is remarkably light.

The foals have average, slightly uphill body shape. Shoulder conformation is sloping. The topline should clearly be more closed and the back but especially the loin section should be better connected. Croup conformation is generally sloping, the croups however have good length.

The legwork radiates lots of quality. Stance of the foreleg is generally correct but toeing-out frequently occurs. Stance of the hind leg shows considerable variation.

In walk the foals present quite a variable picture, both in length of stride as well as in expression of the walk. Especially length of stride shows a notably wide range from short to roomy. The foals move with satisfactory rhythm.

The trot is generally roomy and powerful. The foals trot in an uphill frame and with ample suppleness. Placing of the hind leg under the body is satisfactory.

Characteristics highlighted in light blue with a * are optimum characteristics. Favourable score for these characteristics is average, so around 25.

Blue	Average score / characteristic Positive
Light blue	Breed average / satisfactory
Yellow	Wide range in hereditary profile
Orange	Point of attention

With his first foal collection **Menso 542** presented a group of well-developed foals with satisfactory longlined and high-legged quality. In proportion to the number of foals born rather few **Menso 542** foals (26%) were inspected.

Noble expression of the heads is satisfactory.

The necks are long and of vertical build with the head-neck connection being mostly heavy.

The foals have downhill body shape. Shoulder conformation is sloping. A fair few foals would benefit from a more closed topline. The loin connection and particularly the backs should be noticeably stronger. Croup conformation is generally sloping and croups have satisfactory length.

The legwork of the offspring radiates lots of quality. Stance of the foreleg is mostly correct. On average, stance of the hind leg is also correct.

In terms of length of stride the walk shows a wide range with the strides of most foals ranging between average and somewhat short. Expression of the walk shows satisfactory power. The foals move with satisfactory rhythm.

The foals display a good trot. The trot displays good forward reach of the foreleg and satisfactory strength. The foals trot in an uphill frame and with ample suppleness. Placing of the hind leg under the body is satisfactory.

Use hind leg	behind body	26	0	7	12	8	1	under body

Characteristics highlighted in light blue with a * are optimum characteristics. Favourable score for these characteristics is average, so around 25.

Blue	Average score / characteristic Positive
Light blue	Breed average / satisfactory
Yellow	Wide range in hereditary profile
Orange	Point of attention

From **Mans 543's** first year collection 28 foals were inspected. It is a collection of more than satisfactorily-developed and longlined foals with satisfactory high-legged quality. In terms of exterior and movement the foals present satisfactory uniformity. From **Mans 543's** total number of born foals 35% have been inspected.

The foals have good breed expression with aristocratic heads. The necks are mostly long with clear vertical stance. The head-neck connection shows a wide range and hence provides no clear picture.

The foals have average, slightly downhill body shape and the topline should be slightly more closed. Particularly the back section needs more strength. The loin connection however, shows satisfactory strength. Croup conformation is sloping with satisfactory to good length. Shoulder conformation is sloping.

The legwork radiates lots of quality. Stance of the foreleg is largely straight but toeing-in of the foreleg does occur. Stance of the hind leg is generally correct but is also frequently sickle-hocked.

Length of stride in walk shows a wide range and therefore does not provide a clear picture. Expression of the walk shows satisfactory power. A few foals struggled with the rhythm.

The foals trot with satisfactory to good ground coverage. Placing of the hind leg under the body is satisfactory. The trot has satisfactory uphill quality and power. In trot the foals demonstrate some variation in suppleness but on average their score is satisfactory.

Sicco 550

Rapport Central Research november 2025

Studbook name: Sicco fan de Kadyk
Life number: 202101119
Breeder: H. de Boer, Sintjohannesga
Date of birth: 13 April 2021
Height at withers: 1.67 metres
Lineage: Teun 505 x Star Pref*8 Perf Jasper 366 x Stb Pref*5 A Erik 351 x Star Pref*6 Perf Hearke 254 x Star Cobus 248
Pedigree: 201
Kinship: 17.5 % (average 17.9%)

Watch the video:

SANDRA NIEUWENDIJK

Exterior:
 Breeding type: The stallion has a lot of breed expression and a noble head with a friendly expression. Vertical stance of the neck is satisfactory and has good length but the poll should be a little longer.

Conformation: a longlined stallion with an uphill build and very good length in the foreleg. Shoulder conformation is correct. The stallion lacks a little bit of strength in the topline. The loin section is slightly sunken. Conformation and length of the croup are correct.

Legwork: The legwork is fine and dry with generous, well-shaped feet. Stance of the hind leg is a bit sickle-hocked. The stallion has slightly sloping pasterns in the foreleg. In the near fore movement sequence is toeing-in.

Estimated breeding value exterior:

Reliability	38 - 44%
Breeding type	107
Conformation	109
Legwork	105
Walk	104
Trot	109
Canter	106

DNA and veterinary:
 The stallion has met the regulatory requirements with regard to X-ray testing, semen quality and roaring.
Dwarfism: non-carrier status
Hydrocephaly: non-carrier status
Chestnut factor: non-carrier status
Veterinary: no observations
Roaring: just acceptable

Observations stable manager, riders and drivers:
 Sicco 550 is a pleasant stallion with calm but at the same time alert stable manners. In work Sicco 550 is found to be very hardworking with the right reflexes. In all disciplines he is a fine horse to work with. Eager to learn, with incredible mentality, and already shows good transitions and stays focused.

Central Examination:
 The stallion has successfully completed the performance test at the age of four. In the course of the test he has shown evident progress, both under saddle and in driven work. The stallion shows great pleasure in his work, has excellent work ethics and commitment to trainability, both in ridden and driven work.

Training report:
Walk: The walk is regular but a little short with limited stepping over. The stallion stays somewhat tight in the topline which hinders the hind leg to step fully under and also impacts forward reach in the foreleg. The walk is active and diligent

with satisfactory bend in the hind leg. Scope in the walk clearly improves as soon as the stallion achieves more relaxation in the topline when stretching forward and down. Both riders and drivers point out that the walk feels a little short and tense, but remains regular.

Trot: The trot shows self-carriage, with good ground-coverage and good use of the body. The stallion presents a fine forehand, producing good posture and good lift in the withers. His movement is light-footed and extending the trot comes easy to him, while keeping tact and rhythm. The stallion has good capacity for transitions, he keeps engaging the hind legs and the foreleg reaches far forward. He needs little extra speed when extending the pace. Movement sequence of the foreleg should be a little more correct.

Canter: The canter has clearly improved in the course of the test. The stallion canters with uphill strides from the hind leg, showing good balance and displaying very good trainability and easy transitions in canter.

Riding horse aptitude:
 The stallion proves to have good natural balance and suppleness and enjoys his work. He is good at transition work showing active use of the hind leg. The stallion demonstrates to be an all-round utility horse with an uphill canter that displays strong balance and power. He responds well to the aids, is very eager to work and shows lots of impulsion and reaction from the hind leg.

The stallion possesses a very good mentality and moves with strong natural suppleness, balance and commitment in trot and canter. He is easy to train and has lots of forward go. Movement sequence of the foreleg remains a point of attention, especially the near fore which is a bit swaying and toeing-in.

Driving horse aptitude:
 The stallion proves to be an all-round horse with lots of natural aptitude and potential for showdriving. He moves in an uphill frame, makes front and is very eager to work. In trot he moves with good flexion in the hind leg, good rhythm, moment of suspension, suppleness and capacity for transitions. At slower speed he easily comes back on the hind leg and makes the forward transition with good forward reach of the foreleg. The walk is roomy and regular. In the harness the stallion shows good trainability and willingness to work.

Use foreleg	8.0
Use hind leg	8.5
Suspension	8.5
Posture	9.0
Front	8.5
Suppleness	8.5
Impulsion	8.5
Total	93.5

Conclusions Central Examination:
 The stallion has successfully completed the Central Examination in all three disciplines. During the training sessions he demonstrated lots of drive and forward go. The canter has clearly improved in the course of the test. The trot is characterised by lots of posture, use of the body and technique. The walk is roomy and regular. The stallion needs to develop slightly more correct movement sequence in the foreleg.

Dam report
 Tooske fan de Kadyk was a Studbook Star Preferent Performance mare, bred from the combination Jasper 366 x Erik 351. She died in 2024 aged 18. The mare has given a total of twelve offspring: nine stallions and three mares, eight of which have been declared Star or higher. Her most recent foal was born in March 2024 and is a colt foal by Herre 524. Her offspring of three years and older have achieved excellent results, both in the sport and at

inspections. Six of the stallions were declared Star, one also with an AA score. Sicco fan de Kadyk achieved the highest result with an AAA score. The two mares of three years old and older are both 1st premium Star. Koosje fan de Kadyk was declared Preliminary Crown in 2022.

Final conclusion
 Sicco 550 is an all-round stallion with three correct basic gaits. In trot and canter the stallion shows lots of balance, and suppleness. He enjoys his work and displays lots of natural aptitude both under saddle and in the harness.

Advice for use:
 The stallion can be widely used. He is best paired to mares with a correct topline. The stallion is expected to add suppleness, balance and flexion to the hind leg as well as improve mentality and trainability. Correctness of the foreleg needs to be considered for pairing options.

SANDRA NIEUWENDIJK

Exterior:

Breeding type: A stallion with ample breed expression and a noble head with a friendly expression. Vertical stance of the neck is satisfactory and has good length but the poll should be a little longer.

Conformation: A stallion with a proportionally strong build. The stallion has an uphill frame with ample length in the foreleg. He has a well-muscled, good topline with correct croup conformation and length.

Legwork: The legwork is fine and dry with generous, well-shaped feet. Stance of the hind leg is a bit sickle-hocked. The stallion has slightly sloping pasterns in the foreleg. In the near fore movement sequence is toeing-in.

Estimated breeding value exterior:

Reliability	38 - 44%
Breeding type	105
Conformation	107
Legwork	106
Walk	105
Trot	109
Canter	103

DNA and veterinary:

The stallion has met the regulatory requirements with regard to X-ray testing, semen quality and roaring.

Dwarfism:	non-carrier status
Hydrocephaly:	non-carrier status
Chestnut factor:	non-carrier status
Veterinary:	no observations
Roaring:	no remarks / good

Observations stable manager, riders and drivers:

Syme 551 distinguishes himself with his friendly and affectionate character. He is people-minded and always willing to work. His inquisitive, cheerful nature and reliable attitude make him a stallion with a fine temperament, good balance and correct reactions.

Central Examination:

The stallion completed the performance test with good results at the age of four. In the course of the test he has shown evident progress, both under saddle and in driven work. The stallion has a fine mentality, enjoys the work and responds well to training. He always volunteers lots of drive and commitment to work. Both riders and drivers describe the stallion as hardworking, with lots of technique in movement, good balance and strong go.

Training report:

Walk: The stallion possesses a very good walk with ample rhythm, scope and use of the body. In the downward transitions to walk he manages to preserve the rhythm.

After the transition the stallion promptly walks on with ample scope, showing good use of the body.

Trot: The trot shows self-carriage with good ground-coverage and good use of the body. The stallion presents a fine forehand, producing good posture and good lift in the withers. Extending the trot comes easy to him, while keeping tact and rhythm. The stallion has good capacity for transitions, he keeps engaging the hind legs and the foreleg reaches far forward. He needs little extra speed when extending the pace. Movement sequence of the foreleg should be a little more correct.

Canter: The canter has clearly improved in the course of the test. The stallion canters well from the hind leg with uphill strides. In canter he displays good balance with easy transitions and responds very well to training.

Riding horse aptitude:

The stallion has natural balance and suppleness and is always enjoying the work. He is good at transitions, showing

active use of the hind leg. The canter is uphill with good balance. The stallion responds well to the aids, is very eager to work and has satisfactory forward go.

He proves to be an all-round utility horse with excellent mentality. In trot and canter he demonstrates a natural talent for suppleness, balance and impulsion. He is easy to train and shows lots of willingness to work. Movement sequence of the foreleg remains a point of attention, especially the near fore which is a bit swaying and toeing-in.

Driving horse aptitude

The stallion proves to be an all-round horse with lots of natural aptitude and potential for showdriving. He moves in an uphill frame, makes front and has great zest for work. In trot he moves with good flexion in the hind leg, good rhythm, moment of suspension, suppleness and capacity for transitions. At slower speed he easily comes back on the hind leg and makes the forward transition with good forward reach of the foreleg. The walk is roomy and regular. In the harness the stallion shows good trainability and willingness to work.

has been declared Model and one mare is Star AA.

Conclusions Central Examination:

The stallion has successfully completed the Central Examination in all three disciplines. During the training sessions he demonstrated lots of drive and forward go. The canter has clearly improved in the course of the test. The trot is characterised by lots of posture, use of the body and technique. The walk is roomy and regular. The stallion needs to develop slightly more correct movement sequence in the foreleg.

Dam report

Fleur fan 'Sweltjes State' is a Studbook Star Sport Performance AA mare from the combination Jerke 434 x Obe 314. The mare was born in the Netherlands in 2009 but is presently stationed in Denmark. In 2018 she completed an IBOP in Denmark which resulted in a 77.5 score.

In total Fleur has given ten offspring (5 stallions and 5 mares), two of which have become Star and one Model. The last foal was a colt foal by Nane 492, the mare was paired five times to this stallion. Ray-Ban is the only stallion (of the two) of 3 years and older who has become Star with an AAA predicate. The mares are all 3 years or older and from these Verona fan 'Sweltjes State Stb Model AA (Epke 474)

Final conclusion

Syme 551 is an all-round stallion with three correct, functional basic gaits. The walk is roomy and sound with good use of the body. In trot and canter the stallion displays ample balance, suppleness and good use of the body. He enjoys his work and displays lots of aptitude and zest for work both under saddle and in the harness.

Advice for use:

The stallion can be widely used and is expected to improve the topline. He possesses good balance and suppleness and is expected to add strength and flexion to the hind leg. The walk is of a high quality. Additionally, Syme 551 can have a positive influence on attitude and trainability.

Roaring:	no remarks / good

During the Central Examination Syb 552 was found to be affected with Distichiasis in both eyes (for explanation see below). After consultation with the owner the stallion was relocated to the veterinary clinic in Emmeloord for treatment. During his stay in Emmeloord Syb 552 was kept in condition by a KFPS stable assistant. In Emmeloord a gene test was taken to establish if the stallion is a carrier of both unfavourable gene variants. At the time of drawing up the final report the outcome of this gene test had not yet come through.

Regulations do not include a clause that Distichiasis is a "no go" for approval. It is a hereditary disorder which is passed on via single recessive trait. This disorder can be diagnosed via a gene test. Since stallions participating in the Central Examination as well as mares used for breeding are not tested for this condition within the KFPS, the disorder presently represents no restriction for approval on regulatory grounds. <https://kfps.nl/nieuws/igentest-voor-oogafwijking-distichiasis-gevonden/>

Observations stable manager, riders and drivers:

Syb 552 is a friendly and uncomplicated stallion. He remains stable and reliable, smoothly adjusts to changes and is easy to guide, even when displaying stallion behaviour.

Central Examination:

Syb 552 completed the Central Examination at the age of four. During the examination he displayed good aptitude both under saddle and in the harness, with posture, balance and rhythm positively catching the eye. The stallion enjoys the work, is very eager to work and always shows commitment. He keeps a light contact on the rein, both in ridden and driven work. According to riders as well as drivers the stallion's reflexes should become a little faster.

Training report:

Walk: The stallion has a very rhythmic walk and steps widely over, but he needs to develop a bit more use of the body. He shows ample rhythm in the transitions from trot to walk.

Trot: The trot shows self-carriage, is roomy and very regular, but occasionally the rhythm is a little high. The stallion presents a beautiful forehand, makes lots of front and moves with good balance. Extensions in trot are satisfactory, maintaining rhythm and regularity, but suppleness and use of the back need to improve a little.

Canter: The canter has considerably improved in the course of the test and displays satisfactory uphill strides with ample balance.

Riding horse aptitude:

The stallion has a natural aptitude for balance, rhythm and self-carriage. He likes his work and turns out to be an all-round horse with a very good uphill canter showing lots of balance. The stallion works in a light contact and responds well to training, but his reaction to the aids needs to improve a bit.

Driving horse aptitude:

The stallion is an all-round horse with a fine posture and lots of front. In trot he moves with good bend in the hock, satisfactory engagement and very good rhythm. As a showdriving horse he needs to develop a bit more capacity for transitions and more forward reach in the foreleg. The walk is roomy and regular. In the harness the stallion shows good trainability and zest for work.

Test results riding test:

Walk	8.0

Impulsion	7.5
Total	80.5

Conclusions Central Examination:

The stallion has successfully completed the Central Examination in all three disciplines. During the training sessions he demonstrated lots of drive and forward go. The canter has clearly improved in the course of the test. The trot is characterised by lots of posture, use of the body and tact. The stallion has a good walk.

Dam report

Sjoerdje fan 't Sarabos is a durable 12-year-old Star mare with heaps of breed expression, and an aristocratic head with large eyes. She has abundant feathers. Her neck is long and vertical with a light head-neck connection. The topline is correct with a wide, well-connected loin section. Croup conformation is slightly sloping but with satisfactory length. The mare slightly lacks length in the foreleg, foreleg is also a bit standing-under. Legwork shows good quality with generous feet. Her walk is regular and active. The trot is regular with satisfactory

bend in the hind leg. She is a calm, alert mare who loves attention. The mare is fully used for breeding with a foal by her side every year.

Final conclusion

Syb 552 is an all-round stallion with three correct basic gaits. He demonstrates ample tact in walk and trot. He is a stallion with a beautiful posture in trot and canter. He shows good trainability and zest for work and moves in a fine contact.

Advice for use:

The stallion can be widely used for breeding and is expected to improve breeding type and a proportional build. This stallion can also improve tact in the walk.

Tibbe 553

Rapport Central Research november 2025

Studbook name: Tyme fan Starking
Life number: 202200071
Breeder: Starking BV
Date of birth: 4 February 2022
Height at withers: 1.67 metres
Lineage: Ulbrân 502 x Star Thorben 466 x Model AA Dries 421 x Star Tjitse 387 x Fb Pref*4 Doeke 287 x Stb Naen 264
Pedigree: 121
Kinship: 17.48 % (average 17.9%)

Watch the video:

SANDRA NIEUWENDIJK

Exterior:

Breeding type: Tibbe 553 is a stallion with classy breeding type, a noble head and lots of front. He has a somewhat heavy head-neck connection.

Conformation: A proportionate stallion with uphill build, lots of front and a somewhat steep shoulder. The topline is correct with a strong loin-croup connection. The croup is lightly sloping and would benefit from a bit more length.

Legwork: The legwork is of good quality with generous feet. Stance of the foreleg is correct.

Estimated breeding value exterior:

Reliability	36 - 44%
Breeding type	105
Conformation	105
Legwork	107
Walk	108
Trot	109
Canter	106

DNA and veterinary:

The stallion has met the regulatory requirements with regard to X-ray testing, semen quality and roaring.

Dwarfism:	non-carrier status
Hydrocephaly:	non-carrier status
Chestnut factor:	non-carrier status
Veterinary:	no observations
Roaring:	no remarks / good

Observations stable manager, riders and drivers:

Tibbe 553 has calm stable manners but clearly needs structure. He thrives best when the work is variable and challenging. He sooner withdraws in himself than giving an explosive reaction. He benefits from a consistent approach and reacts positively to trust and rewards.

Central Examination:

Tibbe 553 completed the Central Examination at the age of three. In the early stages of the test he clearly struggled with relaxation of the topline, which resulted in limited contact on the rein, bend and flexion and he frequently moved with an open mouth. However, the stallion achieved considerable progress in the course of the test. Trainability has improved and he has gained strength and technique in trot. Canter strides are satisfactory but still a little downhill. The stallion has a good walk.

Training report:

Walk: The walk is roomy and active, showing lots of tact.

Trot: The stallion trots with good technique from the hind leg but must learn to relax more in the topline. In the extensions he needs to stay a little more on the hind leg because he still drops a bit in the forehand.

Canter: At the start of the test the canter was somewhat heavy and downward, which showed that the stallion still found it difficult. In the course of the test this markedly improved and he gained in strength and balance.

Riding horse aptitude:

The stallion has a good, regular walk. In trot he moves with good technique in the hind leg but he should develop a little more suppleness in the body, as well as more bend and flexion. Especially on the right rein he clearly struggles with this. The stallion proves to be an all-round utility horse with a fine mentality and ample impulsion. The contact is sometimes a little fidgety and he should show more relaxation and use of the body in the topline. The stallion displays good technique in the hind leg, good zest for

work, trainability is satisfactory and he has lots of impulsion.

Driving horse aptitude:

In the harness the stallion moves in a satisfactory, uphill posture and makes front, but the contact on the rein is still a bit fidgety. The walk is roomy and regular. In trot the stallion presents good posture but capacity for transitions and use of the hind leg need to improve a bit. In showdriving work we see good moments, but here he still has to gain more strength.

Test results riding test:

Walk	8.0
Trot	7.5
Canter	7.0
Balance & posture	7.0
Suppleness	7.5
Transitions	7.0
Impulsion	7.5
Total	81.0

Test results driving test:

Walk	8.0
Trot	7.0
Balance & posture	7.5
Suppleness	7.0
Transitions	7.0
Impulsion	7.5
Total	81.0

Test results showdriving test:

Use foreleg	8.0
Use hind leg	7.5
Suspension	7.0
Posture	7.5
Front	7.0
Suppleness	7.0
Impulsion	7.5
Total	82.0

Conclusions Central Examination:

The stallion has successfully completed the Central Examination in all three disciplines. During the training sessions he demonstrated lots of drive and forward go. The walk is very good, roomy and regular. The trot is characterised by ample suppleness and the canter is good with very good balance.

Dam report:

Aniek fan Starking is a 9-year-old Star mare who is not overly longlined. The mare has a somewhat classical appearance

Character/personality:

		a	b	c	d	e	
Stable manners	difficult				x		pleasant
	energetic				x		calm
	frightened			x			inquisitive
	submissive			x			dominant
	hesitant			x			cheeky

	freezes			x			flighty
Concentration	distracted		x				focused
Learning capacity	little			x			much

* during tacking/hitching up, taking temperature etc. ** mental *** physical

and slightly lacks breeding type, she has little feathers and her head lacks expression. Poll length is a little short which is why her head-neck connection is not light enough.

The neck has satisfactory length but should be more vertical. The shoulder is long with average conformation. The back is a little sunken, the loin section is wide, strong and well-connected. The croup has good conformation and satisfactory length.

Seen from the side, the legwork is hard and correct. Seen from the front stance of the foreleg is toeing-in. In walk the mare moves resolutely, with very roomy and regular strides and satisfactory use of the body. In trot she shows a powerful hind leg that is placed well forward under the body, although she would benefit from a bit more elevation and use of the back. The rhythm in trot is a bit high.

Final conclusion:

Tibbe 553 is an all-round stallion and his good walk positively catches the eye. Because of the tight topline the stallion still struggles with bend, flexion and looseness. In trot he possesses good technique in the hind leg but still needs to build strength.

Advice for use:

The stallion is expected to have a positive influence on the quality of the walk. Tibbe 553 should not be paired to mares with a tight loin section.

Ulco 554

Rapport Central Research

november 2025

Studbook name: Unitas van de Egberdina Hoeve
Life number: 202200751
Breeder: S. Wind, Nijeveen
Date of birth: 23 March 2022
Height at withers: 1.63 metres
Lineage: Omer 493 x Star Sport AA Tjaarda 488 x Star Sjaard 320 x Stb Ritse 322 x Star Walter 282 x Star Pref*3 Jochem 259
Pedigree: 061
Kinship: 16.51 % (average 17.9%)

SANDRA NIEUWENDIJK

Exterior:

Breeding type: Ulco 554 is a stallion with classy breeding type, a noble head and lots of front. He has a somewhat heavy head-neck connection.

Conformation: He is a proportionate stallion with uphill build, lots of front and a somewhat steep shoulder. The topline is correct with a strong loin-croup connection. The croup is lightly sloping and would benefit from a bit more length.

Legwork: The legwork is of good quality with generous feet. Stance of the foreleg is correct.

Estimated breeding value exterior:

Reliability	36 - 44%
Breeding type	103
Conformation	105
Legwork	106
Walk	104
Trot	107
Canter	100

DNA and veterinary:

The stallion has met the regulatory requirements with regard to X-ray testing, semen quality and roaring.

Dwarfism: non-carrier status
Hydrocephaly: non-carrier status
Chestnut factor: non-carrier status
Veterinary: both forelegs mild ossification pedal bone
Roaring: no remarks / good

Central Examination:

As a three-year-old, the stallion successfully completed the performance test. During the test, Ulco 554 showed a lot of progress both under saddle and in harness. He shows a lot of commitment and is easy to work with. He could be a little looser in his body, which would also improve his contact.

Training report:

Walk: The stallion has a tactful, active walk, which could be slightly more spacious and show slightly more use of the body.

Trot: The trot is sufficiently carried and spacious, but could show slightly more suppleness. The stallion remains slightly downward in his body posture. During the examination, the stallion improved his trot. He has developed more elevation and more power in his hind leg use. The stallion can easily extend his trot while maintaining tact and regularity. He has sufficient transition ability in trot, remains sufficiently on his hind leg and extends his foreleg generously. The stallion has correct foreleg movement.

Canter: The horse gallops with sufficient upward jump from the hind legs. He has balance in the canter and is very manageable and sufficiently switchable. Suitability as a riding horse: Ulco 554 has sufficient aptitude as a riding horse, shows great enthusiasm and is willing to work. He is an all-round working horse with three tactful, usable basic gaits. His canter is notable for its spacious jump and great balance. He has sufficient forward drive.

Riding horse aptitude:

The stallion has a good, regular walk. In trot he moves with good technique in the hind leg but he should have a little more suppleness in the body, as well as more bend and flexion. Especially on the right rein he clearly struggles with this. The stallion proves to be an all-round utility horse with a fine mentality and ample impulsion. The contact is sometimes a little fidgety and he should show more relaxation and use of the body in the topline. The stallion displays good technique in the hind leg, good zest for work, trainability is satisfactory and he has lots of impulsion.

Driving horse aptitude:

All-round horse with great enthusiasm. Has sufficient aptitude as a carriage horse. Stallion shows good posture and plenty of space in the foreleg at times. Should be confirmed a little more in this regard. Stallion has clearly developed more power from the hind leg in testing and is therefore able to shift gears and extend sufficiently.

Test results riding test:

Walk	7.0
Trot	7.5
Canter	7.5
Balance & posture	7.0
Suppleness	7.0
Transitions	7.5
Impulsion	7.5
Total	80.0

Test results driving test:

Walk	7.5
Trot	7.5
Balance & posture	7.0
Suppleness	7.0
Transitions	7.0
Impulsion	7.5
Total	80.0

Test results showdriving test:

Use foreleg	8.0
Use hind leg	7.0
Suspension	7.5
Posture	7.5
Front	7.0
Suppleness	7.0
Impulsion	8.0
Total	82.5

Conclusions Central Examination:

The stallion has successfully completed the Central Examination in all three disciplines. During the training sessions he demonstrated lots of drive and forward go. The walk is very good, roomy and regular. The trot is characterised by ample suppleness and the canter is good with very good balance.

Dam report:

Yfke LG is a Studbook Star Sport mare bred from the combination Tjaarda 483 x Sjaard 320. By now she is ten years old and has brought three offspring. Her first offspring is Madam S.W., a Studbook 1st premium Star AA mare by Omer who does

Character/personality:

fairly well in both dressage- and showdriving sports. She also brought Ulco 554 and in 2024 she gave birth to a filly foal by Norbert 444. In the past both Yfke LG and her daughter Madam S.W. booked success in the Fryso Florian Cup. At present Yfke LG is stationed in the United States.

Final conclusion:

Ulco 554 is an all-round stallion and his good walk positively catches the eye. Because of the tight topline the stallion still struggles with bend, flexion and looseness. In trot he possesses good technique in the hind leg but still needs to build strength.

Advice for use:

The stallion is expected to have a positive influence on the quality of the walk. Ulco 554 should not be paired to mares with a tight loin section.

Taco 555

Rapport Central Research november 2025

Studbook name: Taco
Life number: 202201849
Breeder: A.W. Nooteboom, Putten
Date of birth: 3 May 2022
Height at withers: 1.64 metres
Lineage: Foeke 520 x Star Beart 411 x Star Sape 381 x Star Tamme 276 x Star Pref*4 Fokke 217 x Stb Tsjalling 235
Pedigree: 015
Kinship: 18.2 % (average 17.9%)

SANDRA NIEUWENDIJK

Exterior:

Breeding type: Taco 555 is a stallion with ample breeding type and lots of front. The head-neck connection should be a little lighter. Neck conformation is vertical but could be slightly longer.

Conformation: A stallion with a slightly downhill build who needs more length in the foreleg. Shoulder conformation is good. The topline is correct, the loin-croup connection lacks a bit of strength. The croup is high and lightly sloping but with satisfactory length.

Legwork: The legwork is somewhat coarse, but dry and with generous feet in the fore and a bit narrow feet in the hind. The hind legs are slightly sickle-hocked. Stance of the foreleg is correct.

Estimated breeding value exterior:

Reliability	36 - 44%
Breeding type	106
Conformation	104
Legwork	107
Walk	105
Trot	105
Canter	102

DNA and veterinary:

The stallion has met the regulatory requirements with regard to X-ray testing, semen quality and roaring.

Dwarfism:	non-carrier status
Hydrocephaly:	non-carrier status
Chestnut factor:	non-carrier status
Veterinary:	no observations
Roaring:	no remarks / good

Observations stable manager, riders and drivers:

Taco 555 is a calm and reliable stallion with an alert and attentive nature. Taco 555 has a fine mentality, giving rider and driver a stable and trusted feeling. The stallion functions best within a framework of clear structure and predictable routine. Steadfast stimulation of positive behaviour encourages Taco 555 to develop more confidence so that he can cooperate with an increasingly calm and ready attitude.

Central Examination:

Taco 555 completed the performance test at the age of three. Throughout the test his performances were constant. The walk positively stood out and the canter improved in terms of ground-coverage of strides and balance. The stallion has lots of impulsion and is a joy to ride. He has a natural aptitude for posture.

Training report:

Walk: The stallion has ample tact in the walk. He moves in an active and roomy walk.

Trot: The trot shows a very consistent rhythm but transitions as well as suppleness need to improve. In the extensions the stallion must learn to come back more on the hind leg. He tends to walk in a higher tempo when extending the pace and in doing so loses out on elevation. Use of the foreleg is good.

Canter: At the start of the test the canter was somewhat heavy but this has noticeably improved and has gained in strength and balance.

Riding horse aptitude:

The stallion has a naturally good posture. He is attentive, always enjoys the work and has a cooperative attitude. Transitions are satisfactory. He is an all-round utility horse with a very good walk. The aids are very well-established and the horse is very eager to work. Forward go is satisfactory.

He is an all-round utility horse with a very good mentality. Taco 555 needs to develop more suppleness in trot but moves with very consistent rhythm. He moves with good balance in trot and canter. The

stallion has great zest for work, responds well to training and has good impulsion.

Driving horse aptitude:

In driven work the stallion moves in an uphill outline, makes front and is a joy to work with. In the harness he moves in a roomy and regular walk. He produces very good posture in trot but transitions need to improve further as well as use of the hind leg. He has more aptitude for driving work than for showdriving. For showdriving work he needs to achieve more forward reach of the foreleg. He then moves in a high rhythm which negatively affects self-carriage from the hind leg.

Test results riding test:

Walk	8.0
Trot	7.5
Canter	7.5
Balance & posture	8.0
Suppleness	7.5
Transitions	7.0
Impulsion	7.5
Total	84.0

Test results driving test:

Walk	8.0
Trot	7.0
Balance & posture	7.5
Suppleness	6.5
Transitions	7.0
Impulsion	7.0
Total	79.0

Test results showdriving test:

Use foreleg	7.0
Use hind leg	7.0
Suspension	6.5
Posture	7.0
Front	7.0
Suppleness	6.5
Impulsion	7.0
Total	76.0

Conclusions Central Examination:

Taco 555 has successfully completed the CE in both disciplines, but needs to gain strength and convince more in showdriving work. During the training sessions he demonstrated lots of drive and forward go. He possesses a very good, roomy and consistently rhythmic walk. The trot under saddle shows lots of suppleness and the canter lots of balance.

Character/personality:

		a	b	c	d	e	
Stable manners	difficult				x		pleasant
	energetic			x			calm
	frightened				x		inquisitive

Learning capacity	little				x		much

* during tacking/hitching up, taking temperature etc. ** mental *** physical

Dam report:

Mysje fan 'e San Ieren Star is a 13-year-old Star mare with satisfactory durability. She has satisfactory breeding type with an expressive head and a long, slightly horizontal neck. The mare has a somewhat downhill build and would benefit from a little more length in the foreleg. Her conformation should have been a little more longlined and proportionate but she has a good topline. The croup has satisfactory length and is lightly sloping. Her legwork is durable and dry with generous feet, although a bit too sloping in the pastern. Stance of the foreleg is standing-under and stance of the hind leg somewhat sickle-hocked. The mare moves in an active and rhythmic walk and a far forward-reaching foreleg. The trot is regular with good bend in the hind leg. Mysje is an alert horse, very people-minded and with easy contact manners.

Final conclusion:

Taco 555 is an all-round stallion and his good walk positively catches the eye. He is a stallion presenting very good posture in trot but still needs to develop more self-carriage from the hind leg. He canters with satisfactory balance and suppleness. The stallion has satisfactory go and impulsion.

Advice for use:

Taco 555 is expected to improve the walk. He should be paired to mares with satisfactory longlined build.

Tygo 556

Rapport Central Research

november 2025

Studbook name: Tye fan Jentsje's Pleats
Life number: 202201825
Breeder: M. de Groot – Houbeijn, Hilaard
Date of birth: 8 May 2022
Height at withers: 1.65 metres
Lineage: Jurre 495 x Model Sport Pref*4 AA Michiel 442 x Crown Perf AA Rindert 406 x Star Olof 315 x Stb Doeke 287 x Star Teake 273
Pedigree: 027
Kinship: 18.26 % (average 17.9%)

Watch the video:

SANDRA NIEUWENDIJK

Exterior:

Breeding type: Tygo 556 has great breeding type. Head expression could be a bit more aristocratic. The neck is long and vertical, but a somewhat lighter head-neck connection would be preferable.

Conformation: a longlined stallion with horizontal build and very good length in the foreleg. Shoulder conformation is good and the topline is correct. Croup conformation is sloping with satisfactory length.

Legwork: The legwork is fine and dry with generous, well-shaped feet. Stance of the hind leg is a bit cow-hocked and sickle-hocked. The stallion has slightly sloping pasterns in the foreleg.

Estimated breeding value exterior:

Reliability	36 - 44%
Breeding type	102
Conformation	109
Legwork	106
Walk	106
Trot	108
Canter	103

DNA and veterinary:

The stallion has met the regulatory requirements with regard to X-ray testing, semen quality and roaring.

Dwarfism:	non-carrier status
Hydrocephaly:	carrier status
Chestnut factor:	non-carrier status
Veterinary:	no observations
Roaring:	no remarks / good

Observations stable manager, riders and drivers:

Tygo 556 has pleasant contact manners. He reacts well to the aids, is extra good at transitions and the riders describe him as a complete horse. He is easy to train and has a strong urge to perform. Variation and due encouragement are a huge stimulus to Tygo 556. Tygo is a sensitive horse with great potential.

Central Examination:

Tygo 556 successfully completed the Central Examination at the age of three. In the course of the test he has shown great progress, both under saddle and in driven work. The stallion enjoys the work, is very eager to work and always shows strong commitment. Both riders and drivers describe him as an easy to train and reliable stallion.

Training report:

Walk: The stallion possesses a very good walk which at all moments – in transitions, extensions and stretching forward and down – remains very regular. Overstepping is generous and he shows good bend in the hock.

Trot: The trot is light-footed with good suppleness, but needs to develop a bit more self-carriage. The stallion presents a fine forehand, producing good posture and good lift in the withers. Extending the trot comes easy to him, while keeping tact and rhythm. The stallion has satisfactory capacity for transitions but needs to develop more alacrity from the hind leg.

Canter: The canter shows spacious strides with ample use of the body and balance.

Riding horse aptitude:

The stallion has a very good walk by nature. He is attentive, always enjoys the work and is cooperative. The stallion's transitions are satisfactory but he must learn to bring the hind leg further forward under the body. He proves to be an all-round utility horse with a very good walk. The aids are well-established and the horse is very eager to work and has satisfactory forward go.

The stallion possesses very good mentality and proves to be an all-round utility horse. In trot and canter he moves with strong

natural suppleness and balance. He volunteers great zest for work, is easy to train and has lots of impulsion.

Driving horse aptitude:

In driven work the stallion moves in an uphill outline, makes front and shows great zest for work. In trot he moves with good bend in the hind leg and moves with good rhythm, moment of suspension and suppleness. Capacity for transitions is satisfactory, but he should show more active engagement from the hind leg and needs to relax more in the topline. The stallion also shows aptitude for showdriving horse.

Test results riding test:

Walk	8.5
Trot	7.0
Canter	7.5
Balance & posture	7.0
Suppleness	7.5

* during tacking/hitching up, taking temperature etc. ** mental *** physical

Dam report:

Thirsa fan Jentjes Pleats Stb Model Sport AA is a youthful 11-year-old Model mare of proportionate build with good breed expression. The mare's head shows satisfactory noble expression with a light head-neck connection. The neck is long and vertical. The shoulder has satisfactory length and sloping conformation. The mare has a strong topline and good croup conformation and length. Her legwork is clean and dry. Stance of the legwork is correct seen both from the front and the side. The dam has a remarkably good walk and hence the walk seems to be well-embedded in this stallion. The trot is light-footed, powerful with a long moment of suspension but the foreleg needs to develop more forward reach.

Final conclusion:

Tygo 556 is an all-round stallion with a very good walk which positively catches the eye. In trot the stallion presents very good posture and use of the body, but self-carriage from the hind leg needs to improve a bit. The canter has good quality with ample balance and suppleness. The stallion enjoys his work and displays lots of aptitude both under saddle and in the harness. Riders as well as drivers point out that the stallion shows good responses to the aids as well as to training.

Advice for use:

Tygo 556 is expected to have a positive influence on the walk and can also improve trainability and suppleness.

Date of birth: 20 May 2016
Breeder: D.A. Dijkstra & M. Dijkstra, Berlikum
Owner: Folmer & D.A. Dijkstra & M. Dijkstra, Lunteren
Lineage: Jouwe 485 x Star Pref Perf*5 AA Haitse 425 x Star*3 Doaitzen 420 x Star*2 Sjaard 320
Pedigree: 161
Kinship: 18.1%
Observations: None

General

Arent 515 Stb Sport AAA was approved as a 3-year-old stallion in the autumn of 2019 on the basis of his good exterior, more than satisfactory lineage and a good performance showing lots of aptitude for all three disciplines. From his first stud season 67 foals were registered in 2021 with 83% born out of at minimum Star mares. Arent 515 completed the Progeny Test in 2025 on the basis of two year collections of 3- and 4-year-old offspring.

Exterior

The Arent 515 offspring are a uniform batch of correctly-built horses with good legwork. The offspring have satisfactory breed expression thanks to their satisfactorily noble heads, light head-neck connections and necks with satisfactory length. The necks should be somewhat more vertical. Feathers of the offspring is satisfactory. They have satisfactory uphill body shape with satisfactory length in the foreleg, strong and well-connected topline and remarkably good conformation of croups with satisfactory length. Shoulder conformation is average. The horses have good-quality legwork. Stance of the foreleg is markedly straight under the body. Size of the feet is satisfactory. Pastern length is average. The hind leg is a fraction sickle-hocked and conformation of the foreleg is correct. For a more detailed description of the exterior please consult the breeding values for exterior.

Character/Training report

The Arent 515 offspring have pleasant and calm stable manners and are relaxed when being handled. In work reliability is slightly below average. They are sensitive horses with a tendency to tense up, but have good trainability. They give good reaction to the aids and have lots of zest for work. They have satisfactory stamina.

Movement/Performance

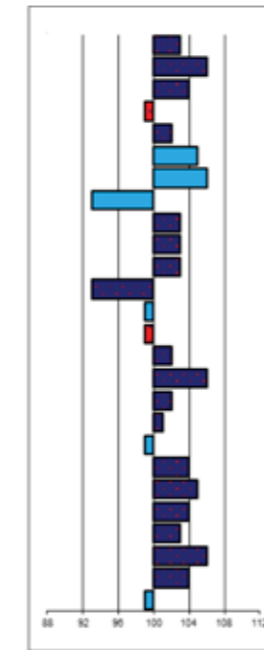

From the Arent 515 offspring 20 horses have completed an ABFP Test, nineteen 3-year-olds and one 4-year-old. Both under saddle as well as in driven work the offspring clearly display very good performances. Four offspring have achieved an AAA score. The Arent 515 offspring stand out with their good rideability, impulsion and capacity for transitions. The walk is powerful showing satisfactory length and use of the body. The trot is roomy and powerful with a good moment of suspension and uphill body posture. Placing of the hind leg under the body is satisfactory. The canter is downhill and should show more engagement of the hind leg as well as scope. When presented in-hand the Arent 515 offspring have a roomy and powerful walk. The trot is roomy with satisfactory power and ample balance and satisfactory suppleness.

Conclusion

Arent 515 has a good hereditary profile for exterior (breeding value total 108; Star% mares 60; Star% stallions 55%). The offspring demonstrate to have good characters both in the yard as well as in the work. They have a tendency to tense up in the work. The offspring clearly score above-average in the tests (breeding value total 103). Based on the overall hereditary profile Arent 515 is approved on offspring.

Boet 516

Date of birth: 26 June 2016
Breeder: A.P. van de Ven, Vinkel
Owner: Folmer & T.C. Visser, Lunteren
Lineage: Jouwe 458 x Star*2 Uldrik 457 x Star Preferent* Sytse 385 x Star*3 Fetse 349
Pedigree: 54
Kinship: 18.4%
Observations: Positive carrier status dwarfism
 Stallion Boet 516 was diagnosed with roaring. Research of his offspring has shown no increased occurrence of roaring.

General

Boet 516 Stb Sport AAA was approved as a 3-year-old stallion in the autumn of 2019 on the basis of his very good exterior, satisfactory quality of lineage and very good performances in all three disciplines. From his first stud season 56 foals were registered in 2021, with 80% born out of at minimum Star mares. Boet 516 completed his Progeny Test in 2025 based on two year collections of 3-year-old offspring.

Exterior

The Boet 516 offspring are a batch of satisfactorily uniform and very breed-typical as well as correctly-built horses with satisfactory size. The offspring have noble heads, long necks and head-neck connection is satisfactorily light and they flaunt remarkably abundant feathers. Vertical conformation of the neck is satisfactory. They have satisfactory uphill body shape. They would benefit from a bit more length in the foreleg. Length and connection of the topline is satisfactory. The croups are remarkably long with average conformation. Shoulder conformation is sloping. The offspring would benefit from more quality in the legwork. Size of the feet is satisfactory. Pastern length is average. Stance of the hind leg is slightly sickle-hocked and stance of the foreleg is frequently toeing-out. For a more detailed description of the exterior please consult the breeding values for exterior.

Character/Training report

The Boet 516 offspring have very pleasant and calm stable manners and are inquisitive as well as relaxed horses when being handled. They earn maximum scores for these character traits. Reliability in the work is high. They are not prone to building up tension and are easy to train. They need to develop a bit more zest for work, perseverance and stamina.

Movement/Performance

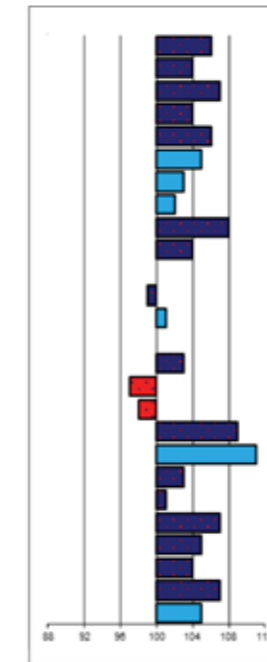

From the Boet 516 offspring 21 individuals have taken part in ABFP Tests at the age of 3. Especially under saddle the offspring show good performances. In driven work they present average performance results. One offspring has acquired an AAA score. The Boet 516 offspring display good rideability. The walk is average in terms of length of stride and power. In driven work rhythm of the walk needs attention. In ridden work the trot is roomy, satisfactorily uphill and with good self-carriage and suppleness. In the harness the offspring need to develop more self-carriage and moment of suspension. The canter is roomy with satisfactory strides. When presented in-hand scope and power of the walk is average. The trot is roomy and powerful with satisfactory balance and suppleness.

Conclusion

Boet 516 has a good hereditary profile for exterior (breeding value total 106; Star% mares 61; Star% stallions 58%) and he is found to strongly improve breed expression and conformation. The legwork is a point of attention. The offspring display excellent character in the yard. In the work the horses are very reliable and respond well to training. In use they perform at their best in ridden work (breeding value total 99). Based on the overall hereditary profile Boet 516 is approved on offspring.

Ulbe 506

Date of birth: 13 May 2014
Breeder: H. & J. Jørgensen, Nordborg (Denmark)
Owner: Joe and Kayla Michielli, Moscow (US)
Lineage: Anders 541 x Star Pref*6 Anton 343 x Star Pref*6 Hearke 254 x Star Pref*4 Cobus 246
Pedigree: 10
Kinship: 16.6%
Observations: Positive carrier status dwarfism

General

Ulbe 506 Stb Sport Elite AA was approved as a 3-year-old stallion in the autumn of 2018 on the basis of his good exterior, good lineage, his relatively low kinship of 16.5% and a good performance showing lots of aptitude for all three disciplines. From his first stud season 37 foals were registered in 2020, with 59% born out of at minimum Star mares. After his first two crops of offspring Ulbe 506 could not yet meet the requirements of the Progeny Test and was put on hold in December 2024. In March 2025 the required number of at minimum 20 tested offspring was reached and Ulbe 506 received preliminary approval. By the end of 2025 the mandatory minimum of 40 tested offspring was also reached.

Exterior

The Ulbe 506 could do with a bit more size. They somewhat lack breed expression: on average the heads are noble, the necks need more length and more vertical build. Feathers of the offspring is satisfactory. They have average, slightly downward body shape, satisfactory toplines and good conformation of a slightly short croup. Shoulder conformation is a bit steep. Leg quality is average. The feet are small and the pasterns should be a bit longer. Seen from the side stance of foreleg and hind leg is correct. Stance of foreleg ranges between average and slightly toeing-in. For a more detailed description of the exterior please consult the breeding values for exterior.

Character/Training report

The Ulbe 506 offspring demonstrate above-average stable manners: they are very pleasant, calm, inquisitive and relaxed horses. In the work reliability is satisfactory, they show good trainability and respond well to the aids. Occasionally they are easily distracted. They demonstrate satisfactory perseverance and stamina.

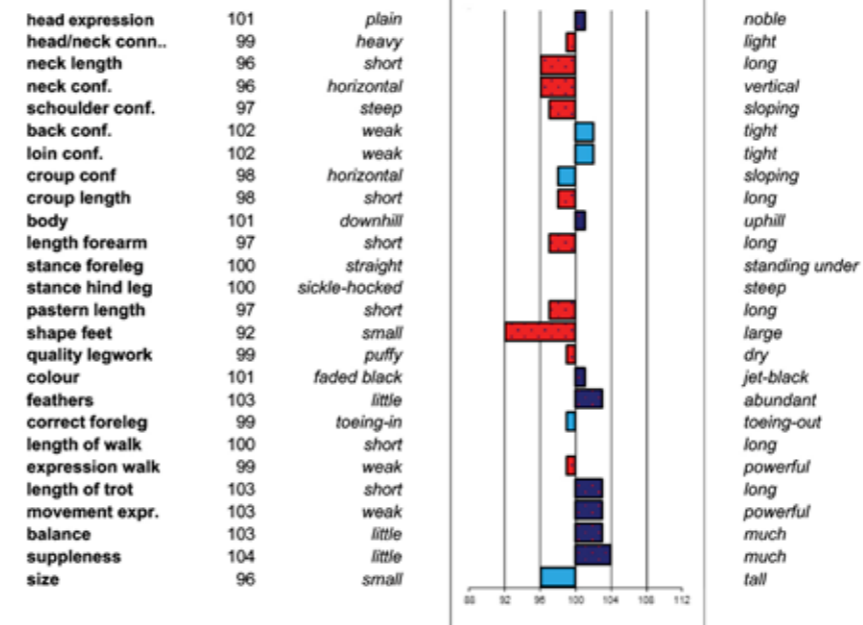

Movement/Performance

From the Ulbe 506 offspring twenty 3-, 4- and 5-year-old individuals have taken part in ABFP Tests. Under saddle the offspring display below-average performances. In driven work the performance is satisfactory. Three offspring have achieved an AAA score. They display good impulsion and rideability and more than satisfactory capacity for transitions. The walk presents a variable picture across a wide spectrum. A number of horses lacked rhythm in the walk. In the riding test the walk is generally powerful with good ground-coverage. In driven work the walk is average. In trot the offspring come more into their own stride in the in-harness parts, especially in terms of self-carriage, suppleness and posture. The canter is active with satisfactory quality of stride but stays a little bit on the forehand. When presented in-hand the Ulbe 506 offspring present a walk with average scope and power. The trot has satisfactory scope and power with satisfactory balance and suppleness.

Conclusion

Ulbe 506 presents a slightly below-average hereditary profile for exterior (breeding value total 98; Star% mares 36; Star% stallions 38%). The offspring demonstrate to have good characters both in the yard as well as in the work. In use they score slightly below-average in the riding test and slightly above-average in the harness test (breeding value total 97). Based on the overall hereditary profile and his contribution to outcrossing Ulbe 506 is approved on offspring.

Wardy 509

Date of birth: 6 June 2015
Breeder: J.Tj. Bouma, Nijlân
Owner: J. van der Weide, Tjerkwerd
Lineage: Hette 481 x Star Pref Perf*6 Goffert 369 x Model Sport*3 Feitse 293 x Star Pref Perf*8 Hearke 254
Pedigree: 8
Kinship: 18.1%
Observations: positive carrier status Hydrocephaly

General

Wardy 509 Stb Sport Elite AAA was approved as a 3-year-old stallion in the autumn of 2018 on the basis of his very good exterior, good lineage and the completion of a positive performance test in all three disciplines. From his first stud season two foals were born in 2020 but these were not registered and/or inspected. To date eleven mares have been registered. After seven stud seasons Wardy 509 has a limited number of offspring (24) and none of these have taken part in a performance test.

Exterior

Only 11 offspring have been inspected, this is insufficient for a reliable profile.

Character/Training report

None of the Wardy 509 offspring have taken part in any performance test, hence there is no available information concerning the character of offspring.

Movement/Performance

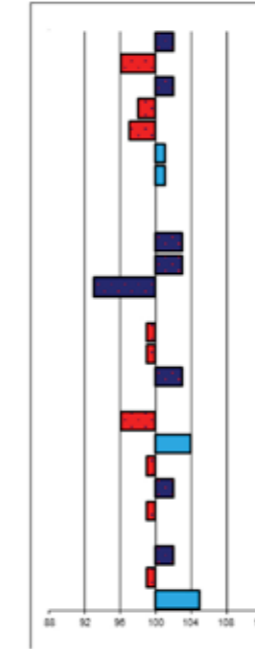

None of the Wardy 509 offspring have taken part in any performance test, hence there is no available information concerning sport aptitude of offspring.

Conclusion

Even after an extra year because of the low number of offspring, Wardy 509 does not meet the requirements of progeny testing. In compliance with Article 23.4.d of the Stallion Selection Regulations he is therefore put on hold with the number of allowed stud services being zero.

Wibout 511

Date of birth: 7 May 2015
Breeder: L. Haytema, Wons
Owner: Stal de Mersken, Siegerswoude
Owner: Ganaderos Huastecos SANRO SRL DE C.V., Atizapan de Zaragoza (Mex)
Lineage: Thorben 466 x Star Pref*3 Doeke 287 x Star Pref*6 Tjimme 275 x Star*1 Fokke 217
Pedigree: 34
Kinship: 16.8%
Observations: Knee Osteochondritis off hind C2/B3 (flattening)

General

Wibout 511 Stb Sport Elite AAA was approved as a 4-year-old stallion in the autumn of 2019 on the basis of his very good exterior, good-quality lineage and his low kinship. In the Central Examination Wibout 511 completed a good under-saddle performance and a more than satisfactory performance for driving- and showdriving work. From his first stud season 63 foals were registered in 2021, with 87% born out of at minimum Star mares. By the end of 2025 a total of nineteen 3- and 4-year-old offspring from two year collections have taken part in progeny testing.

Exterior

The Wibout 511 offspring are a uniform group of generous, satisfactorily longlined and correctly-built horses with across the board a good size. The offspring slightly lack classy breed expression, the heads should be more aristocratic and head-neck connections are somewhat heavy. The offspring have average length of neck but neck conformation is horizontal. Feathers are strikingly sparse. They have satisfactory uphill body shape with slightly above-average length of forearm. Length and connection of topline is satisfactory. Croup is average in terms of conformation and length. The legwork is of good quality with good pastern length and small feet. Stance of the hind leg is a little sickle-hocked and stance of the foreleg is frequently toeing-in. For a more detailed description of the exterior please consult the breeding values for exterior.

Character/Training report

The Wibout 511 offspring have very pleasant and calm stable manners and are inquisitive as well as very relaxed horses when being handled. They earn maximum scores for these character traits. The offspring are neither dominant nor cheeky. Reliability in the work is satisfactory, they have a tendency for building up tension but this does not affect trainability. They need to develop a little more zest for work, perseverance and stamina and present satisfactory learning capacity.

Movement/Performance

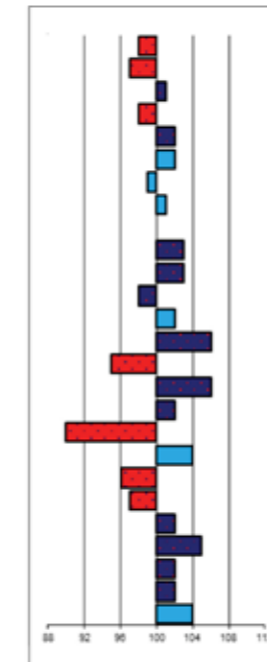

Until now sixteen 3-year-old and three 4-year-old Wibout 511 offspring have completed an ABFP Test. Under saddle the offspring display slightly below-average performances. What especially catches the eye is the variation between scores of offspring and no offspring has achieved an AAA score. Under saddle the walk is short, though active, but they need to develop more use of the body and 11% of offspring lack rhythm. The trot is roomy and active but would generally benefit from more self-carriage and suppleness. The canter shows good scope and activity but remains a bit downhill in body shape. The offspring demonstrate above-average impulsion and rideability. In driven work the offspring display a similar picture in walk and trot as under saddle. This results in more or less the same total scores for in-harness (72.2) as under saddle (72.7). When presented in-hand the Wibout 511 offspring move with a somewhat short walk that slightly lacks expression. The trot has satisfactory scope with strong movement expression and satisfactory balance and suppleness.

Conclusion

Wibout 511 has a satisfactory hereditary profile (breeding value total 102: Star% mares 37) and strongly improves legwork (breeding value 107) and hereditary profile for breed expression is below average (breeding value 95). The offspring have excellent character and stable manners. In the work the horses show satisfactory reliability and respond well to training. Wibout 511 has a low kinship of 16.8% and is therefore expected to contribute to blood variation. Regulations dictate that Wibout 511 is put on hold because after two year collections he still does not meet the requirements of progeny testing. As soon as the last offspring has been tested he will be re-assessed.

Willem 508

Date of birth: 5 May 2015
Breeder: W.E. Lokhorst, Ederveen
Owner: Galloper Stud, Berkel en Rodenrijs
Lineage: Hette 518 x Star Pref*4 Folkert 353 x Star*2 Tsjomme 329 x Model*3 Oege 267
Pedigree: 61
Kinship: 18.5%
Observations: Positive carrier status dwarfism. Both sides osteochondrosis (OCD) in the fetlock joints, grade D

General

Willem 508 Stb Sport AAA was approved as a 3-year-old in 2018 on the basis of his more than satisfactory lineage, good exterior, more than satisfactory aptitude for riding- and driving horse and satisfactory aptitude for showdriving. From his first stud season 30 foals were registered in 2021 with 88% born out of at minimum Star mares. Willem 508 completed the performance part of his Progeny Test in 2024 on the basis of two year collections of 3- and 4-year-old offspring. To date Willem 508 has not yet met the requirement of forty inspected offspring needed for permanent approval. Presently 33 offspring have been inspected.

Exterior

The Willem 508 offspring are a satisfactorily uniform batch of well-developed horses with correct builds and a good foundation. The offspring would benefit from a stronger breed expression. The horses would especially benefit from more feathers and a deeper black coat colour. Body shape is satisfactorily horizontal with good length in the foreleg. The offspring have satisfactory strength in the back with a well-connected loin section and noticeably good croup conformation. Their croups are long. The horses have dry legwork. Seen from the side stance of the foreleg is remarkably straight. Stance of foreleg ranges between correct and slightly toeing-in. Stance of the hind leg is satisfactory. Shape of the feet and pastern length are average. For a more detailed description of the exterior please consult the breeding values for exterior.

Character/Training report

In the yard the Willem 508 offspring are inquisitive, slightly dominant and cheeky but also relaxed when handled. In the work they are a bit sensitive and easily tense up. They should volunteer more zest for work and be more responsive to the aids. They also score below-average on stamina and perseverance, the offspring are rather easily distracted and they could score better on learning capacity.

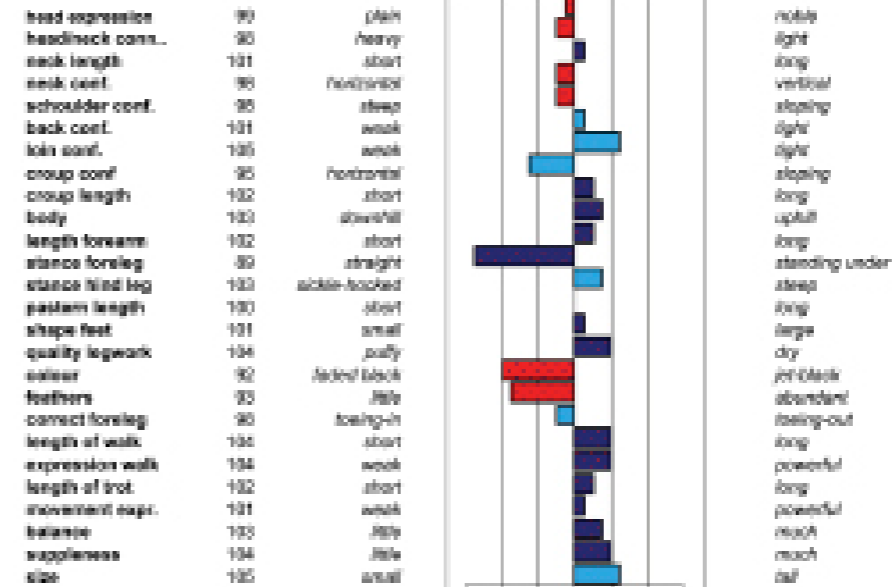

Movement/Performance

From the Willem 508 offspring 19 individuals have taken part in ABFP Tests. Both in the riding- and driving test the offspring present average performances, but they generally do better in the riding parts. Two offspring have achieved an AAA score. In the riding test a third of the offspring struggled with rhythm in the walk. In trot the hind leg should step further under the body. In the riding test the offspring need to develop more use of the body in both walk and trot and more capacity for transitions. The canter shows satisfactory scope, activity and quality of stride. When presented in-hand the Willem 508 offspring display a roomy and powerful walk. The trot is roomy and remarkably powerful with distinctly good balance and suppleness.

Conclusion

Willem 508 has a satisfactory hereditary profile (breeding value exterior total 101; Star% mares 55%; Star% stallions 42%) with the strong loin section and good croup conformation catching the eye. The offspring are somewhat dominant and cheeky when handled and in the work score a fraction below-average in terms of character. With the in-hand presentation the offspring demonstrate a good walk and trot. The offspring present satisfactory scores in their performances (breeding value movement / sport aptitude total 105). Based on the satisfactory overall hereditary profile Willem 508 remains preliminary approved on offspring with a stud limitation of 75.

Stallion family-tree KFPS-studbook stallions | November 2025

In this overview the KFPS-studbook stallions are displayed in 4 studs lines:

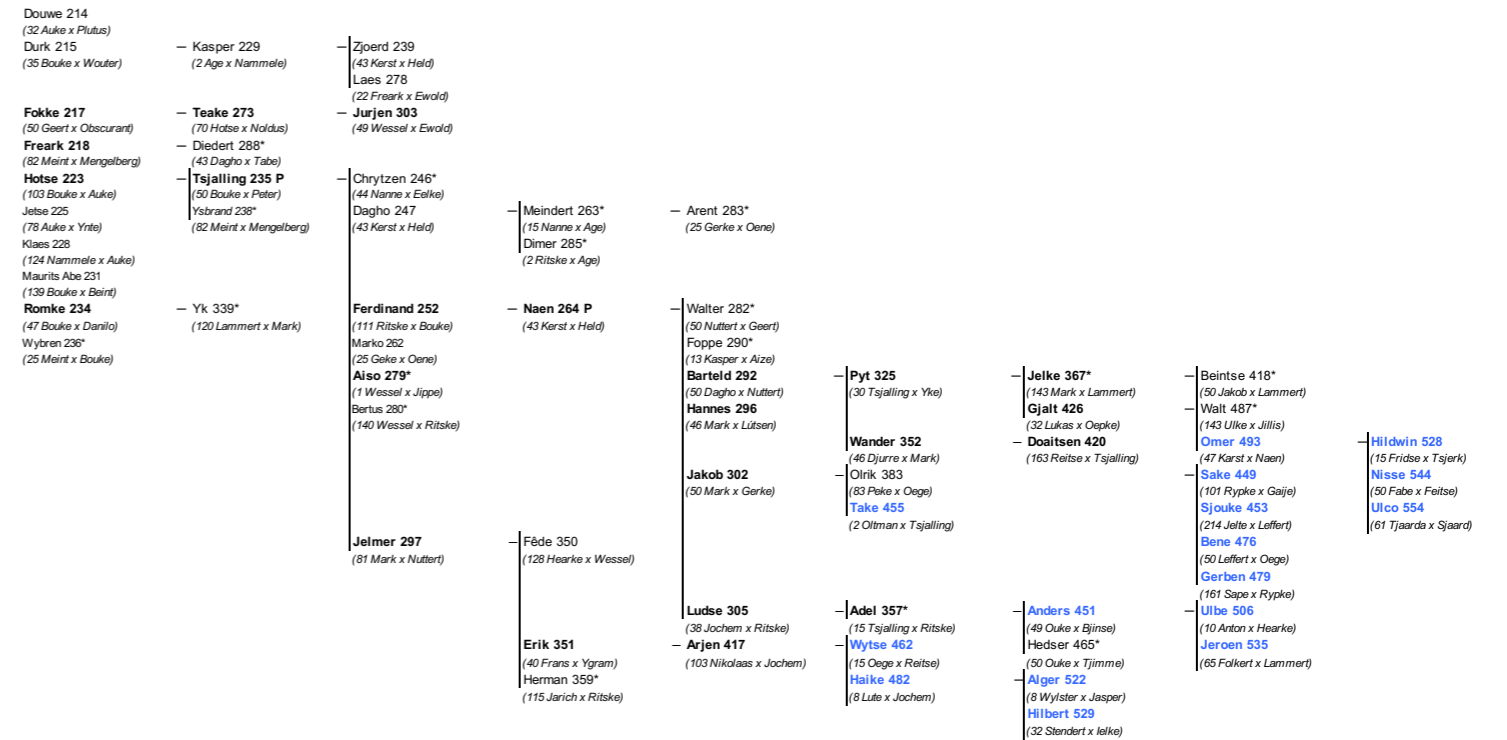

Age, Ritske, Jarich and Mark. The outline only include the stallions that currently have a covering license or in the direct male line of an active Stallion arise or are the maternal grand dam of an active studbook Stallion. In parentheses the Mareline from which a Stallion results is displayed as well as the maternal grand dam and the maternal great grand dam. The current, living and available studbook stallions are indicated in blue.
