

Preliminary Report Progeny Test | March 2025

# Ulbe 506

**Date of birth:** 13 May 2014  
**Breeder:** H. & J. Jørgensen  
**Owner:** Extreme Fresians Moscow ID, VS  
**Lineage:** Anders 451 x Star Pref\*6 Anton 343 x Star Pref\*6 Hearke 254 x Star Pref\*4 Cobus 248  
**Pedigree:** 10  
**Kinship:** 16.6%  
**Observations:** Positive carrier status dwarfism

## General

Ulbe 506 Stb Sport Elite AA was approved as a 3-year-old stallion in the autumn of 2018 on the basis of his good exterior, good lineage, his relatively low kinship of 16.5% and a good performance showing lots of aptitude for all three disciplines. From his first stud season 37 foals were registered in 2020, with 59% born out of (at minimum) Star mares. After his first two crops of offspring Ulbe 506 could not yet meet the requirements of the Progeny Test and was put on hold in December 2024. To this date twenty offspring have been tested. The required number of forty inspected offspring has so far not been realised.

## Exterior

The Ulbe 506 offspring are a satisfactorily uniform group of horses that would benefit from slightly more size. The offspring should have more breed expression: on average the heads are noble, the necks need more length and more vertical build. Feathers of the offspring is satisfactory. They display satisfactory horizontal body shape, good topline and good croup conformation. Shoulder conformation is average. Leg quality is average. The feet might be slightly bigger and the pasterns a bit longer. Seen from the side stance of foreleg and hind leg is correct. Stance of foreleg ranges between average and slightly toeing-in. For a more detailed description of the exterior please consult the breeding values for exterior.

## Character/Training report

The Ulbe 506 offspring demonstrate above-average stable manners: they are very pleasant, calm, inquisitive and relaxed horses. In the work reliability is satisfactory with good trainability and they respond well to the aids. Occasionally, they are easily distracted. They demonstrate satisfactory perseverance and stamina.

## Movement/Performance

From the Ulbe 506 offspring twenty individuals have taken part in ABFP Tests. The offspring show satisfactory performances under saddle as well as in driven work. Three offspring have achieved an AAA score. They display good impulsion and rideability and more than satisfactory capacity for transitions. The walk presents a variable picture across a wide spectrum. A number of horses lacked rhythm in the walk. In the riding test the walk is generally powerful with good ground-coverage. In driven work the walk is average. In trot the offspring come more into their own stride in the in-harness parts, especially in terms of self-carriage, suppleness and posture. The canter is active with satisfactory quality of stride but still a little bit on the forehand. When presented in-hand the Ulbe 506 offspring on average present a roomy walk showing satisfactory power. The trot is roomy and powerful with a lot of balance and suppleness.

## Conclusion

Ulbe 506 has a satisfactory hereditary profile (breeding value total 102: Star% mares 30; Star% stallions 25%). The offspring demonstrate to have good characters both in the yard as well as in the work. In use they score slightly below-average in the riding test and slightly above-average in the harness test (breeding value total 101). Based on the overall hereditary profile Ulbe 506 receives preliminary approval on offspring.
