

Waander 512

Date of birth: 28 May 2015
Breeder: M. De Jong, Tjalleberd
Owner: Stoeterij Friese Visser, Drachten
Lineage: Loadwyk 431 x Star Beart 411 x Star*1 Oepke 266 x Star Preferent*5 Naen 264
Pedigree: 38
Kinship: 17.7%
Observations: osteochondrosis C5 (flattening) on hock right hind leg

General

Waander 512 Stb AAA was approved in the autumn of 2019 as a 3-year-old stallion on the basis of his good exterior and good performances. From his first stud season 46 foals were registered in 2021 with 74% born out of (at minimum) Star mares. Waander 512 Stb AAA completed his Progeny Test in 2024 based on one year collection of 3-year-old offspring.

Exterior

The Waander 512 offspring are a uniform group and because of their markedly noble head, light head-neck connection and average neck length and neck conformation show good breeding type. They are not overly rich in terms of feathers. The offspring have good length in the foreleg and satisfactory uphill conformation. They have satisfactory slope in the shoulders. Back and loin section should be stronger. The croup has average length and conformation. The legwork should radiate more quality. In many cases the foreleg is standing-under and the hind leg is noticeably sickle-hocked. Seen from the front, stance of the foreleg is correct. The offspring have good length in the pastern and the feet are average in size. For a more detailed description of the exterior please consult the breeding values for exterior.

Character/Training report

The Waander 512 offspring have pleasant, calm, inquisitive, slightly dominant and cheeky stable manners. When handled they are relaxed. In the work they score below average on reliability, trainability and attitude to work, they are sensitive and easily tense up. They give satisfactory reaction to the aids and have satisfactory zest for work.

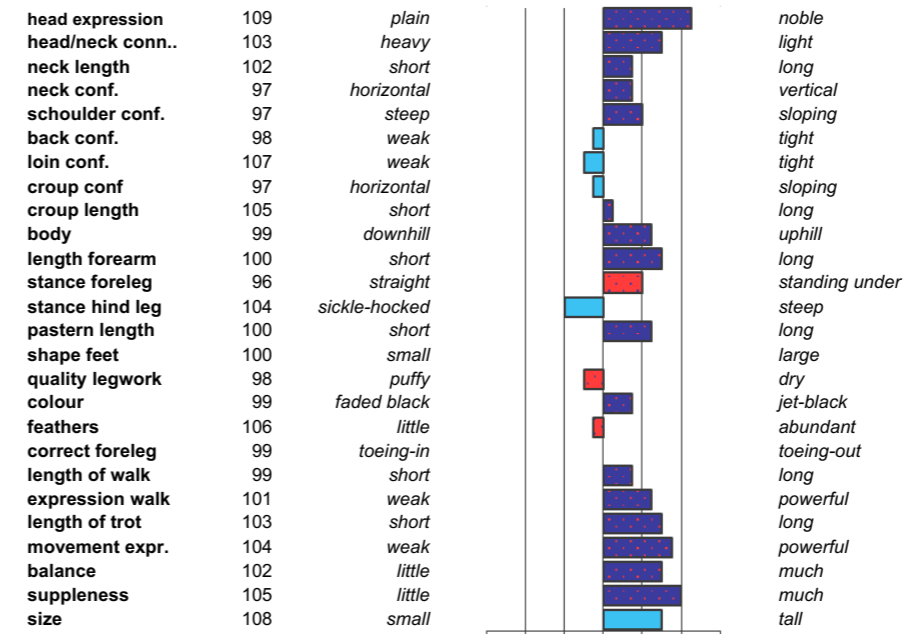

Movement/Performance

Nineteen Waander 512 offspring have participated in ABFP Testing and one stallion (Reitse van de Pôle) has completed the saddle exam of the 2024 Central Examination with 69.5 points. The Waander 512 offspring are especially in their element in driven work, where they show a more than above-average total score of 76.6. The riding tests show average results in terms of total score. Six horses have achieved an AAA score. The trot is roomy with good use of the foreleg, strong impulsion and especially in the driven parts good self-carriage, moment of suspension as well as suppleness, combined with good use of the body. In canter the horses move with roomy and active strides, but they need to develop more use of the body and a distinctly more uphill frame. The walk should show more use of the body and particularly in the driven part should show more strength and length of stride. Capacity for transitions is better in the driving test than in the saddle test. The in-hand walk of the Waander 512 offspring demonstrates satisfactory length of stride and activity. The trot is roomy and powerful with a lot of balance and suppleness.

Conclusion

Waander 512 has a satisfactory hereditary profile for exterior (breeding values breeding type 110, conformation 106, legwork 102; total 107; Star% mares 35%; Star% stallions 44%). In the yard the offspring prove to have a good character, but they can also be a little cheeky. In the work they tend to have more reliability and trainability. In their performances they show a clearly above-average total score in the harness test, with the quality in trot especially catching the eye. Based on the satisfactory overall hereditary profile Waander 512 will be permanently approved on offspring.
